Professional Summary

Django Developer with professional experience in backend web development using Python and Django. Strong expertise in building scalable web applications, designing RESTful APIs, implementing authentication and authorization systems, and working with Django ORM. Experienced in database design and application security best practices.

Professional Experience

SkillBridge academy - internship

- Developed and maintained a scalable **Bingo automation system** integrated with Telegram Bot APIs, supporting automated game participation and payment workflows
- Automated approve/reject payment processing using **telebirr integration**, reducing manual verification workload by approximately 80%.
- Optimized bot scalability and concurrency handling using a **master-worker cluster architecture**, improving system stability during high traffic periods.
- Implemented **watchdog pattern** and auto-recovery mechanisms to prevent sleeping and downtime issues on Render, increasing bot uptime to over 95%.

Projects

Beer Sales And Distribution System

- Led development of a full-stack sales and distribution system using Django.
- Integrated **Yenepay payment gateway** to support secure online transactions.
- Implemented authentication, **email verification**, and role-based access control to enhance system security.
- Reduced data redundancy by integrating third-party services and optimizing database workflows.

Food Ordering Platform | Full-Stack Django Web Application

- Developed a full-stack food ordering and delivery management platform supporting Customers, Restaurant Owners, Delivery Personnel, and Administrators through a role-based access control system.
- Designed and implemented end-to-end order processing workflows including order placement, restaurant confirmation, food preparation, delivery assignment, order tracking, and completion.

Multi-User Blogging & Content Management System

- Developed a multi-user blogging and content management platform using Django and Bootstrap with role-based access control.
- Implemented custom user roles including Administrators, Managers, Editors, and Authors with permission-based content management workflows.

- Built complete article management functionality including content creation, editing, publishing, updating, and deletion operations.
- Designed a secure authentication and authorization system to manage user access and content ownership.
- Developed category and content organization features to improve content discoverability and management.

Smart Food Stall Pre-Ordering System | Django Full-Stack Project

- Designed and implemented a role-based authentication system supporting Students, Stall Owners, and Administrators with customized dashboards and permissions.
- Built a complete order management workflow including order placement, token generation, order tracking, cancellation, and status updates (Pending, Confirmed, Preparing, Ready).
- Developed RESTful API endpoints for live order status updates, slot demand monitoring, and menu item retrieval.
- Implemented AI-based demand forecasting using a weighted moving average algorithm to predict future food demand and recommend low-congestion pickup slots

Skills

Programming Languages & Frameworks

- **Programming Languages:** Python, JavaScript, C++
- **Frameworks /Libraries:** Node.js, Django and React.,React-Native
- **Platforms** — Docker, Git, Linux/Unix

Education

DebereMarkos University 

August

Software Engineering, BSc

2023

Core Coursework: Object-Oriented Programming (OOP), Data Structures and Algorithms, Advanced Programming, Web Development and Operating Systems,
